

LASERTECH

Introduced new...

FILM OUTPUT Printer

for Screen Printing, Flexo, Block Making/Etching etc.

Print Size 24 Inch x Roll

2 The Industry's Easiest RIP
FilmMaker RIP

Colors from a color separation are imaged as positives onto transparent film for screen printing. Film positives are output onto sheets or rolls of film using many types of film output devices. Inkjet printers with the correct film work well for output, are inexpensive, and readily available.

Same Film Positives/Negatives are used to make Flexo Polymer Plates, Zinc, Magnesium, Aluminum blocks, metal etching and many other applications

Using FilmMaker For
Film Positives

1 Year online Support
